CENTRAL VOLUMETRIC DILUTION STATION

**** The dilution station can be adapted to any situation according to the specific needs of the customers.**

Features

- This technology can be used to dilute any type of chemical cleaning products (alkaline, caustic, acids, chlorinated products).
- One of its principle advantages is a precision of dilution which is not affected by the inevitable variations of water pressure or flow from the feeding system. This precision is particularly interesting when you want to maintain constant rate of concentration of 200 ppm for purifiers. (in order to have the optimum « kill » without having to rinse surfaces before the production began.)
- The part of the machine who measures the quantity of chemical to inject into the water, is in fact driven by the water flow which enter it.
- This system is very precise (up to 2000 :1), very robust and required much less maintenance.

NCT-SC3-A-B-C MODEL DISTRIBUTION STATION FOR DISINFECTION FOR A CENTRAL DILUTION SYSTEM

This station allows to distribute effectively the sanitary chemicals for various needs of cleaning in a big variety of industries. The station must be used with a central dilution system.

Features :

- All metallic parts are made from stainless steel.
- High quality stainless steel ball or globe valve.
- Connections with quick connects.
- Closed cabinet made from resistant plastic.

NCT-SC3 STATION REPLACEMENT OR ADDITIONAL PARTS

Stainless steel lance and faucet with ball valves for NCT-SC3

Lance for foam and cleaner

- BM-F2 FIX 3/4'' for SC3-A
Include : 50' of 3/4'' blue hose and stainless steel lance for foam.
- BM-Q2 QUICK CONNECT for SC3-A & B
Include : 50' of 3/4'' blue hose and stainless steel lance for foam.
- BA-F FIX 3/8'' for SC3-A
Include : 50' of 3/8'' red hose with quick connects, lance and ball valve.
- BA-Q QUICK CONNECT for SC3-A & B
Include : 50' of 3/8'' red hose with quick connects, lance and ball valve.
